

Mission 1554 29 Jan 1960

See <http://arcg.is/1CjH0f> for an interactive web map version.

Flight path notes. The flight path was reconstructed from declassified documents found in CREST (see below, nos. 6-7) and the tracking film frames. It was corrected for several segments with reference to georeferenced vertical frames from the main camera.

Mode notes. Main camera appears to have been in 3-position Mode 2 throughout. A declassified document (no. 7) appears to indicate three times when the pilot was to turn off Mode 2 during the mission (i.e., prior to the final shutoff at the end of photo capture). Inspection of film roll 11 confirmed the accuracy of this document for the shutoff east of Baghdad.

Main Camera notes. The frame numbers from the negative margins are not identical to the frame numbers next to the frame clock. Starting at some point after frame 209, the frame clock number is ahead by one. By frame 1352, the frame clock number is ahead by two. Based on the sequence of camera positions, the margin frame number appears to be the correct one.

Tracking camera notes. The tracking camera clock stopped at several occasions during the flight, including around frame 201 or 202.
